IEWatch - The Award Winning HTTP/HTML Analyzer

June, 2006

For Immediate Release
Contact: press@iewatch.com

IEWatch Software LLC has released IEWatch Professional 4.0, a plug-in for Microsoft Internet Explorer that allows capturing HTTP traffic and analyzing HTML source. Designed for web developers, site administrators and quality assurance engineers IEWatch is *the most essential* web development tool to get the job done fast and efficiently.

With increasingly complex Web pages carrying dozens of inline and external style sheet and script definitions, the markup in most Web pages have become unwieldy. IEWatch HTML analysis breaks down the received HTML into categories and additionally gives you a statistical overview of the elements in the page. Furthermore you can locate the HTML code of any visible element with one click by using the innovative HTML Spotlight feature.

In HTTP analysis mode, IEWatch unlocks the hidden HTTP data stream that is sent from the web browser to the server, revealing HTTP headers, Cookies, GET queries and POST data. Even data sent over secure HTTPS can be viewed in unencrypted form. To help reduce the sheer volume of HTTP requests, IEWatch allows the most extensive filtering, including filters on HTTP headers and response content. You can even seek through the HTTP log information of all the web sites you previously visited. If you are looking for a profiling tool to boost your web application performance, IEWatch can display HTTP performance information on a timeline chart, allowing you to spot performance bottlenecks at one glance.

IEWatch makes investigating HTTP requests and responses plus exploring the resulting content a walk in the park. The redesigned user interface with Visual Studio® style docking windows lets you configure the entire work area at will, providing you with the most flexible workspace for any particular task.

IEWatch has received 5-star and editor choice ratings from major software download sites. Businesses around the world including many Fortune 500 companies are taking advantage of accelerating their web development with IEWatch.

System requirements are Internet Explorer version 6.0 or more recent and Windows 98 or more recent.

The price of a single user license is US\$ 129.00.
A 21-day fully functional evaluation copy of the product is available at:
