WebReplay 2.0 – advanced web automation and testing

September 2008

For Immediate Release

Contact: press@iewatch.com

Carlsbad, CA (Sep. 2008) - IEWatch Software LLC has released WebReplay 2.0, a plug-in for the Internet Explorer browser that allows automated web surfing, form filling, website testing and web data extraction. Designed for web developers, site administrators, quality assurance engineers and basically anybody who wants to automate tasks performed in the web browser, WebReplay makes automating your browser a walk in the park.

When recording your actions, WebReplay creates controls similar to a GUI object map. This allows WebReplay to automatically adapt to changes so you don't have to modify the script if the web page layout changes.

WebReplay's unique features make it highly useful for an entire spectrum of web professionals:

- Power Surfers can automate repetitive tasks on their frequently visited web sites, or extract web page text from any internet site.
- Web Developers can quickly run regression tests on their development web sites before QA handoff, thus saving an entire QA cycle and valuable resources.
- Web Analysts can use WebReplay combined with IEWatch to regression test web sites to make sure that all pages are sending the correct web analytics requests.
- System Administrators can log and analyze the page load times of entire web sites and quickly identify web page outages.
- Quality Assurance Engineers can use WebReplay to automate web applications and to perform functional and regression testing. The combination of WebReplay with IEWatch allows QA personnel to create highly reproducible tests while collecting HTTP information to track down hard to find bugs.

Many new features have been added to WebReplay 2.0 including a project scheduler, a web data extraction tool and regular expression support.

With the new feature set, WebReplay Professional 2.0 successfully competes with web site testing software tools that cost several thousand dollars at only a fraction of the cost.

System requirements are Microsoft Windows® 2000 or higher, and Internet Explorer 6 or higher.

The price of a WebReplay Professional single user license is US\$ 169.00.

WebReplay Professional as well as the Free Edition are available at: <http://www.iewatch.com>
